## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0401788 in view of Sughrue (6,254,766).

The EP reference discloses an adsorbent composition comprising about 0.1-15 weight % of nickel oxide and a carrier comprising 50 weight % of zinc oxide and 50 weight % of alumina. The composition is prepared as claimed. It is estimated that the composition would have atomic ratio of Zn: Ni as claimed. See entire patent.

The EP reference; however, does not disclose that the nickel is in a reduced valance state.

Sughrue discloses an adsorbent composition comprising nickel, zinc, and alumina wherein nickel is in reduced state. See col. 2, lines 51-65.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the process of the EP reference by treating the adsorbent to produce an adsorbent having nickel in reduced valence state because Sughrue teaches that an adsorbent with nickel in reduced valence state would permit the removal of sulfur with minimal effect on the octane rating of the treated stream.

#### ***Election/Restrictions***

The argument that the restriction is improper and the search and examination of the entire application can be made without serious burden to the examiner is not persuasive. Applicant has not shown that the alternative use for the composition as proposed by the examiner is not feasible and because examining claims 27-35 along with the elected claims would place a burden on the examiner.

The requirement is still deemed proper and is therefore made FINAL.
